

How safe are my files?

SUMMARY

Instant Intelligence takes security very seriously and the service is highly secure. Only authorised users with a valid password and access code can access the system, and the areas they can get to are fully controlled by your administrator or your partner on your behalf.

MORE INFORMATION

It's probably safer than you keeping the paper in a filing cabinet or the images on your own computers. Information flowing between our servers and your computer is encrypted using 128-bit SSL, so it's safer than sending a paper document or a CD in the post. Our systems are housed in the United Kingdom at one of the most secure data centres around, on state of the art equipment, automatically backed up multiple times every day.
